Other embodiments will occur to those skilled in the art and are within the following claims:

What is claimed is:

| | Applicant: For: Method for I | Senecal et al. Conductive (electrical ionic, and photoelectric) Polymer Membrane Articles, and Producing Same |
|----|--|---|
| 1 | 1. | A conductive (electrical, ionic, and photoelectric) polymer membrane article, |
| 2 | comprising: | |
| 3 | | a non-woven membrane of polymer fibers, wherein at least some of the fibers |
| 4 | have diameters of less than one micron; | |
| 5 | | wherein the membrane has an electrical conductivity of at least about 10 ⁻⁶ S/cm. |
| 6 | | |
| 7 | 2. | The conductive polymer membrane of claim 1 wherein the membrane is |
| 8 | photoelectric | |
| 9 | | |
| 10 | 3. | The conductive polymer membrane of claim 2 wherein the membrane produces a |
| 11 | current of at least about nanoamps/cm ² . | |
| 12 | | |
| 13 | 4. | The conductive polymer membrane of claim 2 wherein the polymer fibers include |
| 14 | a photo-reactive dye. | |
| 15 | | |
| 16 | 5. | The conductive polymer membrane of claim 4 wherein the polymer fibers further |
| 17 | include conducting nanoparticles embedded therein. | |
| 18 | | |
| 19 | 6. | The conductive polymer membrane of claim 4 wherein the polymer fibers further |
| 20 | include a conducting polymer. | |

| 22 | 7. | The conductive polymer membrane of claim 1 wherein the conductivity is created | |
|------|---|--|--|
| 23 | by the inclusion of a conducting polymer in the polymer fibers. | | |
| 24 | | | |
| 25 | 8. | The conductive polymer membrane of claim 1 wherein the conductivity is created | |
| 26 | by the inclus | sion of conducting nanoparticles embedded in the membrane polymer fibers. | |
| 27 | | | |
| 28 | 9. | A method of fabricating a conductive polymer membrane article, comprising: | |
| 29 | prov | iding a polymer solution; | |
| 30 | addir | ng to the polymer solution at least one of a conductive polymer and conducting | |
| 31 | nanoparticle | s to create a spin dope; and | |
| 32 - | electrostatically spinning the spin dope to create a membrane of conductive polymer | | |
| 33 | fibers having | g an electrical conductivity of at least about 10 ⁻⁶ S/cm. | |
| 34 | | | |
| 35 | 10. | The method of claim 9 wherein the membrane is photoelectric. | |
| 36 | . • | | |
| 37 | 11. | The method of claim 10 wherein the membrane produces current of at least about | |
| 38 | nanoamps/cn | n ² . | |
| 39 | | | |
| 10 | 12. | The method of claim 10 wherein a photo-reactive compound is also added to the | |
| 11 | polymer solu | tion before it is spun. | |
| 12 | · | | |
| 13 | 13. | The method of claim 12 wherein conducting nanoparticles are in the spin dope | |
| 4 | and embedded in the polymer fibers. | | |

The method of claim 12 wherein a conductive polymer is in the spin dope and in the polymer fibers.

48

The method of claim 9 wherein conducting nanoparticles are in the spin dope and embedded in the polymer fibers.

- 52 16. The method of claim 9 wherein a conductive polymer is the spin dope and in the
- 53 polymer fibers.
